

Pict. 1: GLWD 2000-17

## DESCRIPTION

Based on the **RS-GUIDESYSTEMS** wall mount unit GLW 2000, but doubled for a duplex close off effect. The sturdy cases protect the extractable tapes in an ideal way. With its maximum tape extension of 20 m on each module, even large distances are cordoned off easily. There are different options for application: extraction of one tape only, extraction of both tapes, single or double tape extraction in one direction, double extraction in different directions, which offers a total maximum length of 40 m!

Assembling by screwing. Wall clips for fixation of tape ends are not included, but available as accessory.

New, technical modification with arrester button! (not shown in illustration yet)

If required, the customer can choose the distance between the two wall mount units – this means that the length of the holder is manufactured according to the customer's needs.

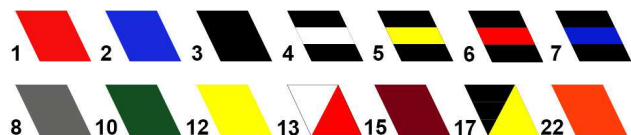

## CASE COLOUR

## BELT COLOUR

Different standard colours available.

Special colours and digital printing upon request.

## SPECIFICATIONS

case	metal, black
total height	individually choosable
diameter incl. holder	approx. 20 cm
